COMPENG 2SH4 Project – Statement of Contribution

Your Group Number   **Vincent and Ali**

Your Name   Ali Bandali

Your Team Member's Name   Vincent Yu

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

    Worked on iteration 1B, 2B, iteration 3 feature 2 and 3 , and the bonus.
    My partner and I split up the initial 2 sections and then my partner did the first iteration of part 3, and I finished the rest along with bonus since all the code from those three parts were heavily related. We communicated about how we would implement the beginning classes so there was limited confusion when completing the iterations individually.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

    My partner completed the initial class set up, iteration 1A, 2A and iteration 3 feature 1.
    in addition, my partner, initially set up a meeting to begin the project and delegated which tasks we should both do based on the project manual.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

    We worked in parallel for most of the project and did our own assigned tasks which worked well. To improve we could have communicated more on how our iteration implementation would affect each others code especially when testing the output. Better commenting might have been helpful too even if it seemed unnecessary since it would've been the first time either of us saw the code for the other parts of the project.
